Microsoft Purview

INSIDER RISK MANAGEMENT (IRM)

Protecting confidential information, the NSK Group and each of us

Starting from 13 October 2026

IRM will begin across the NSK Group to help prevent confidential information from leaking outside the company.

Your daily work steps will not change.

WHAT IS IRM? Insider Risk Management (IRM) uses machine learning to assess company PC and Microsoft 365 activity, then alerts authorized security staff when risk is assessed as high.

What changes

- Cloud uploads, file transfers and similar actions receive a risk score.
- High-risk activity may generate an alert for authorised review.
- You may be asked to help confirm facts if needed.

What stays the same

- No extra application, installation or new work step.
- No warning will appear on your screen from IRM.
- IRM is not used to assess productivity or work attitude.

HOW IRM WORKS

1 COLLECT
Microsoft 365, device, label and DLP event logs

2 ASSESS
Actions are combined and assigned a risk score

3 ALERT
An alert is raised only above a set threshold

4 REVIEW
Authorised staff focus on high-risk alerts

INVESTIGATION AND RESPONSE FLOW

An alert does not mean misconduct. Reviews move forward step by step only when needed.

STEP 1
Alert raised
The system detects high-risk behavior

STEP 2
First review (anonymous)
The Japan Security Team reviews it anonymously. If no issues are found, the process ends.

STEP 3
Second review
If further review is required, the regional security team assesses it, including the business context

STEP 4
Fact-checking
If necessary, we consult the employee or their manager.

STEP 5
Legal and HR Involvement
Serious or intentional violations are handled in accordance with internal policies

PRIVACY-BY-DESIGN APPROACH

Routine analysis and first review are anonymous. Names are disclosed only when further investigation is judged necessary, and access is limited to authorised staff.

IMPORTANT

An alert does not mean misconduct. Legitimate business activity and false positives are possible. Reviews move forward step by step only when needed.

Use only approved business services and handle NSK information responsibly.
